

SAFE-T-GARD®

MODEL SG1

LOW VOLTAGE A/C CONDENSATE OVERFLOW ALARM

The Safe-T-Gard® Model SG1 Condensate Overflow Alarm is designed to alert building occupants to an A/C condensate drain clog before overflows and water damage occur. The Safe-T-Gard® works with the Safe-T-Switch® Condensate Overflow Shut-off Switch or most other 24-volt overflow switches to sound an audible piezo buzzer and flash an LED when the switch cuts the thermostat circuit due to a back up in the condensate drain.

Safe-T-Gard® features a simple two-wire design with back or side wire entry ports making installation quick and easy. The product includes mounting tape and comes pre-wired with 18 AWG, 4-foot lead wires.

SPECIFICATIONS: 24 Volts A/C, 2 Amp Piezo Buzzer, Flash LED Indicator
